# `myo.lowlevel`

---

### Introduction

This module is a `ctypes` based wrapper for the Thalmic Myo SDK that is compatible with Python 2 and 3. The source is hosted on [GitHub](#).

There are two ways to use the myo-python bindings: You can either implement a `myo.DeviceListener` (this is the preferred method as it includes the least overhead) or you can use the `myo.Feed` object to read the most recent data when you really need it.

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`
